Experimental Design

For each item:

1. Rate the sentence
2. Choose a picture
3. Jump to the next item

Note: 8 conditions x 4 lexicalization x 2 (VP+AP) = 64 experimental items → + 64 filler items → 128 items divided in 3 blocks

Group	Sentence (code)	Pilot	Expt
Bad	老奶奶摔了坏一个花瓶 (<i>f044</i>)	1.8	3.30
Bad	山坡被小狗跑来下了 (<i>f055</i>)	2.8	2.17
Medium	屋子小狗进了两次 (<i>f041</i>)	4.2	4.52
Medium	屋子被小狗进了 (<i>f040</i>)	4.2	3.60
Good	老奶奶摔坏了一个花瓶 (<i>f018</i>)	7	6.91
Good	小狗进屋子来了 (<i>f039</i>)	7	6.78

Overt lower Deg⁰ *chu* and split-AP

Closed Adj's do not occur with *chu*

→ Lower Deg⁰ *chu* 出 requires movement

bi-comparatives

- (1) ta-de-fenshu bi pingjun-fen gao (chu) hen duo
 his.score BI average.score high EXCEED very much
 'His score is much higher than the average.'
- (2) beizi bi pingzi (*chu) man (*chu) hen duo
 cup BI bottle EXCEED full EXCEED very much
 Intended: 'The cup is much fuller than the bottle.'

Since TrComp always requires movement and does not allow closed scale adjectives, it does not show the A⁰-to-lowerDeg⁰ movement.

Category

- ▶ *chu* is an affix at lower Deg⁰ (resists closed Adj)
- ▶ *geng* is a head at lower Deg⁰ (allows open & closed Adj)
- ▶ *bi* occurs with both *chu* or *geng*
- ▶ TrComp allows *chu*, but not *geng*

chu, geng and measure phrase

- ▶ *chu* always have measure phrase
- ▶ *geng* allows measure phrase (slight preference for no MP?)

Mismatch between Syntax and Semantics

Alternative theory for V–A non-distinction in Mandarin: *Mismatch*

- ▶ This study supports a distinction between V and A in Mandarin
- ▶ The challenge from distribution tests is the assumption that ‘aspect marking must show verbhood’

Do stage-level predicates count as 'time-sensitive'?

Adjective-internal variation

The 3-way taxonomy does not capture the Adjective-internal distinction between individual-level and stage-level predicates

- ▶ Individual-level predicate are not sensitive to time.
 - ▶ Stage-level predicate are.
 - ▶ We saw John { naked / #intelligent }.
 - ▶ *naked* is s-level; intelligent is i-level.
1. Toledo & Sassoon: s-level compares across situations, and i-level compares across individuals
 2. time-sensitive means formal Tense-Aspect(-Mood), but not lexical-semantic
